Clearance: TS/SCI with CI Poly

EXPERIENCE

Senior Security Researcher

June 2021 - Present

U.S. Army Cyber Command - Cyber Solutions Development

Fort Gordon, GA

- Managed a team of 12 security researchers using tools like IDAPro, BinDiff, LLVM, and QEMU, to research, discover, and exploit vulnerabilities in embedded devices and Windows applications, saving the organization over \$1mil in expected costs when compared to similar vendor solutions.
- Developed a shellcode library using C, Python, and CMake, enabling developers to cross-compile ubiquitous shellcodes for Intel, ARM, MIPS, and PowerPC processor architectures, eliminating duplicate shellcodes across the organization's codebase.
- Triaged public vulnerability disclosures and rapidly reverse-engineered, modified, and released bespoke
 exploit tools, providing initial access to computer networks of interest for operations teams across multiple
 organizations and uniformed services.
- Instructed operations teams on the effective use of exploit tools, increasing stakeholder interaction and influencing organizational policy to emphasize consistent stakeholder engagement.
- Hosted monthly training events covering reverse-engineering and exploit development techniques, increasing the organization's number of trained security researchers by 25%.
- Overhauled the organization's technical documentation process using Markdown, LaTeX, Pandoc, CMake, and Python, enabling developers to better detect documentation errors prior to release.

Junior Security Researcher

January 2019 - May 2021

U.S. Army Cyber Command - Cyber Solutions Development

Fort Gordon, GA

- Redesigned the organization's binary obfuscation methods using LLVM, rendering obfuscated artifacts unrecognizable compared to the original, inhibiting effective reverse-engineering efforts and increasing the operational longevity of cyber capabilities.
- Implemented modules for a Python exploit framework, automating common operator tasks and reducing human interaction, increasing mission efficiency for all operations teams.
- Automated the organization's compilation, testing, release, and deployment process by integrating existing projects into GitLab CI, expediting tool development and release for all developer teams.
- Obfuscated web-based malware written in PHP using open source software and designed command, control, and configuration mechanisms using Python.

EDUCATION

Georgia Institute of Technology

Atlanta, GA

Master of Science, Computer Science (Specialization: Computing Systems), 4.0 GPA

December 2022

U.S. Army Cyber Center of Excellence

Augusta, GA

Cyber Basic Officer Leader Course, Distinguished Honor Graduate

December 2018

Mississippi State University

Starkville, MS

Bachelor of Science, Computer Engineering, 3.61 GPA

December 2017

CERTIFICATIONS

Offensive Security Certified Professional (OSCP)
Certified Information Systems Security Professional (CISSP)
GIAC Reverse Engineering Malware (GREM)

CompTIA Security+ (Sec+)
Certified Ethical Hacker (CEH)
Cisco Certified Network Associate (CCNA)

- Splinter Shell | https://github.com/one2blame/splinter-shell | C, Python, NumPy, amd64 April 2021 Present Employed unsupervised learning techniques to train a machine learning model on a corpus of packet captures, classifying normal and malicious network traffic and encoding shellcodes to bypass intrusion prevention systems.
- Constraint-based Variable Analyzer | https://github.com/one2blame/cs6340 | C++, LLVM, Z3 October 2021 Transformed programs into LLVM intermediate representation (IR), derived Datalog facts from the instructions, and designed a reaching definition and live variables analysis using Z3.
- Data Dependency Tracker | https://github.com/one2blame/cs6747 | Python, Ghidra July 2021 Wrote Python scripts to parse Ghidra disassembly, generating control flow graphs and data dependency tracking for functions in malware specimens.
- Stock Trading Robot | https://github.com/one2blame/cs7646 | *Python, NumPy, pandas* April 2022 Employed reinforcement learning to train a model on historical stock metrics, assessing the trading robot's performance on out-of-sample data, outperforming a manual trading strategy by 30%.
- Multi-class Random Forest | https://github.com/one2blame/cs6601 | *Python, NumPy* July 2022 Improved upon existing multi-class classification tree and random forest implementations, achieving a classification accuracy of 84% on out-of-sample data.
- Extensible MapReduce Framework | https://github.com/one2blame/cs6210 | C++, gRPC, Protobuf April 2020 Designed an extensible, distributed system to MapReduce a large corpus of data, applying data sharding and load balancing to enhance performance.
- **Distributed File System** | https://github.com/one2blame/cs6200 | *C++, gRPC, Protobuf* November 2019 Engineered a concurrent server capable of handling clients initiating asynchronous gRPC requests to upload and download files.

TECHNICAL SKILLS

Languages: Python, C/C++, x86, amd64, MIPS, ARM, PowerPC, TileGX, Java, PHP, JavaScript

Libraries: gRPC, OpenMP/MPI, librarian Portion, Mininet, OpenFlow, LLVM, Z3, NumPy, SciPy, pandas, pwntools

Developer Tools: Git, GitLab CI, Atlassian Bamboo, Jupyter, Docker, QEMU, GDB, WinDbg, angr, AFL, KLEE

Applications: VMware, VirtualBox, Vagrant, Ghidra, IDAPro, BinaryNinja, BinDiff

Frameworks: Metasploit, WordPress

VOLUNTEERING AND COMMUNITY SERVICE

Mentor February 2022 – May 2022

Grovetown High-school Robotics Club

Grovetown, GA

Mentored high-school students on robotics mechanical engineering, setup of electrical components, and development of Arduino code for controller logic. Lead the Grovetown High-school Robotics Club to take 1st place in the Central Savannah River Area (CSRA) Fully Wired high-school robotics competition.

Volunteer May 2021 - July 2021

Air Force Association CyberPatriot

Augusta, GA

Moderated a Virtual CyberPatriot Summer Camp via Zoom and provided instruction to high-school students on techniques to harden the security posture of various Linux distributions.

Volunteer August 2019 – March 2020

Girls Who Code Augusta, GA

Facilitated club meetings and taught 6th - 12th grade girls Python game development.

ACHIEVEMENTS AND AWARDS
